

EpicRail™ is an LED-based illuminated handrail. This energy efficient, color changing and programmable sustainable solution addresses the architectural need for a handrail that produces safety required illumination levels for both interior and exterior stairs, ramps and walkways.

Perfect for low ambient lighted areas that demand design and safety attributes as it delivers illuminance levels that compliment applications such as themed parks, theaters, cruise ships, casinos and many other applications.

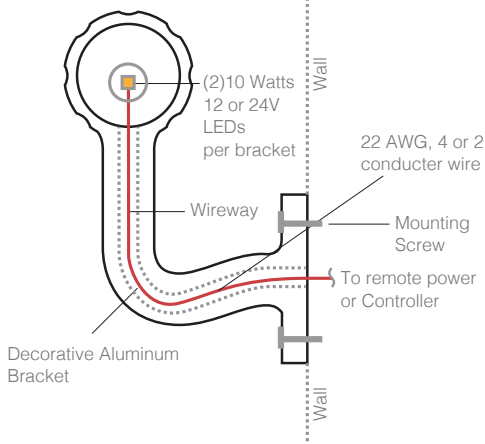

EpicRail™ may be post mounted or wall mounted. Final post and wall bracket spacing must be determined by a licensed architect or structural engineer. Available in a variety of light outputs: warm white, cool white or RGB. ClearForm fixture component of the Epicrail is a stand alone unit and is available in incremental lengths that range from 1' to 3'. All handrail component parts are engineered for quick installation. Field welding or cutting is typically not required. All parts are prefabricated to field dimensions and are assembled on site. Contact Epic Sky for recommended handrail installers.

12 or 24 volt 10 Watts LEDs at Constant Current are standard. For detailed information regarding daisy chain limitations, remote distance limitations, power supply options, and dimming options consult an Epic Sky Technology representative.

BEAM SPREAD

WALL MOUNTED

KEY FEATURES

- 12-24V
- 2 Watts per Bracket
- -10° - 50°
- Black Anodized Aluminum coating standard (custom coating finishes available)
- Color changing light optional
